

Thermal-Lube knows that to keep an essential service or business running, you need to maximize uptime and reduce potential problems. No matter if your vehicles are busses or subway cars hauling people, or off highway vehicles hauling coal, Thermal-Lube can help.

From engine oil to hydraulic oil, every application and environment is different. With simple analysis, Thermal-Lube can determine the best lubricant changeover time – extending your service intervals and reducing your costs. Furthermore, the same analysis can reveal what component of the lubricant is degrading first, and Thermal-Lube can offer new formulations or re-additization options to reduce the rate of degradation.

Operating in an environmentally sensitive area? Thermal-Lube can provide custom biodegradable lubricants to meet local regulations and validate oil changeover.

#### Key Benefits:

- Extend your lube service intervals and keep your machinery running in any climate with custom blended synthetic oils and greases.
- Continuous improvement – optimize your lubricant formulation for long life with complementary oil analysis and re-formulation.
- Reduce your working capital by consolidating oil and grease inventory with multi-purpose and multi-grade alternatives.
- Environmental Stewardship – Reduce waste and demand on primary resources by maximizing lubricant life.
- Environmental Protection – Use biodegradable lubricants to protect the natural environment.
- Compliance – Thermal-Lube's biodegradable oil changeover validation service ensures third party contractors are in compliance.

## Applications:

- Subways
- Busses
- Trains
- Automobiles (Cars and SUV's)
- Trucks
- Off Highway Vehicles
- Snow Plows and Salt Trucks
- Asphalt Trucks and Screeds
- Utility Trucks with Cherry Pickers

Applications for Fleet Vehicle Services
