

Planned and unplanned downtime for service and maintenance translates to less productivity – especially in mission critical operations and processes. When you introduce dust from manufacturing processes and raw materials you need an oil strategy to keep your equipment running reliably and longer between oil change intervals.

Key Benefits:

- Extend your lube service intervals and keep your machinery running smoothly with custom blended synthetic oils and greases.
- Continuous improvement – optimize your lubricant formulation for long life with complementary oil analysis and re-formulation.
- Re-additize your lubricant to extend its operating life or consider real time condition monitoring for critical applications.
- Reduce your working capital by consolidating oil and grease inventory with multi-purpose and multi-grade alternatives.
- Environmental Stewardship – Reduce waste and demand on primary resources by maximizing lubricant life.
- Go green with available biodegradable lubricants.

Applications:

- Material Handling Equipment
- Process Equipment
- Ovens
- Conveyors
- Compressors
- Generators

Applications for MRO
