

XL0865

SYNTHETIC HEAT TRANSFER FLUID

XL0865 is a fully synthetic heat transfer fluid containing state-of-the-art synthetic additives blended in a stable synthetic oil base conforming to USDA CFR 28 regulations.

XL0865 exhibits unique properties such as:

- High temperature stability.
- Low temperature fluidity.
- Very low volatility.

The inherent (Newtonian) high Viscosity Index (VI) of **XL0865** negates the addition of VI improver. This results in high shear stability (no viscosity loss), and, consequently prolongs the life of the oil.

XL0865 is non-corrosive and compatible with petroleum products and most sealing materials.

XL0865 is blended to most viscosity grades for maximum heat transfer efficiency at actual operating temperatures.
